DEVELOPING DEVICES AS TECHNOLOGIES KEEP EXPANDING.

Our company is dedicated to the development of new products that include new ecologically friendly techniques. The replacement of old techniques with new techniques will help benefit our environment in general. Our new developments have functional aspects to them that will help facilitate daily chores. They help maintain a healthy environment. They introduce a low consumer costs with a higher quality product. They also reduce, and or eliminate maintenance completely with new and ecologically efficient techniques.

ONE-LIGHTS CANADA IS A CULTURE OF LIGHTING

“Our company One-Lights Canada brings together a history of lighting techniques, spaces, and artifacts to develop post modern spaces that are safe, efficient, friendly, elegantly lit, and sustainable. Our company officially opened its doors in Montreal, Quebec, Canada, and most of our staff prefers to stay undercover. We bring lighting ideas to life, and we enjoy doing it.”

- Papaconstantinou, Constantinos Founder of One-Lights Canada and Produits Maison DIN Home Products.

An abundant amount of devices have already hit the shelves that include the, “Internet of Things (IoT).” More than a billion of these type of devices already exist, and more than half if not all, function at an exceptional rate. With technologies rising and automotive services being programmed the rate of monthly charges, and amounts of subscriptions rise. To successfully scale from all these new devices we have chosen to simply re design with a functional modern model in mind. This first report of our new product allows us to express to you our new development its features, components, and benefits.

The new economical and affordable design functions without any third party activation cost. You purchase the device and it is fully functional without any monthly costs. It is a plug and play system with no software required. It is simple like a lamp.

The new device uses, “Internet of Things (IoT),” mobile system the same as cellular phones to communicate. The device is called One-Lights. It is flexible, and can allow more than hand full of programming to be integrated in to the device. In many cases One-Lights Canada does partner up with engineering companies to further incorporate new technologies ideas and building processes.

Partner with us, and pitch us your idea.
din-home@one-lights.com

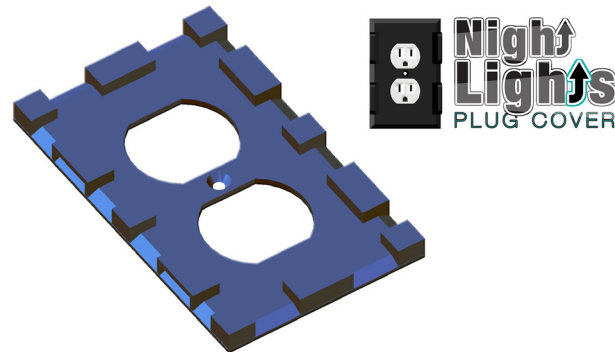

Its components and materials introduce new safety components to them, such as water resistant materials, and ecologically friendly LED lighting components.

Easy installation reduces costs, and integrated programming exceeds the users expectations for functional success.

As devices immerge the democracy of function will play out to shift the standard way and allow for a more utopian solution. The devices trade in real time, and create a market out of the physical world. In the market we find ourselves with billions of devices. Connectivity and better means of connectivity is what One-Lights Canada aims for in future development as a means of developing new better products, and a better experience.

An abundance

amount of technological patterns, languages and programmable algorithms are made available in today's age. With time only speeding up, never slowing down, One-Lights Canada is proud to introduce a new Side Emitting Night Lights that add a touch of elegance to a room, while maintaining a safe responsive atmosphere. We choose to develop simple and efficient technologies that moderate daily living.

The safety lights turn On when your main lights are turned off, flawlessly with our new patented technology. On top of that we have an integrated feature on our Night Lights that allows you to literally control the output voltage of your plug.

New technologies AT ONE-LIGHTS CAN BE CLASSIFIED IN TWO BASIC DIVISIONS.

One of them is called **One Switch**. One Switch is a Light Switch cover plate with integrated new, patented technology.

The other is called **Night Lights**. The Night Lights don't act like normal Night Lights. They also have integrated new, patented technology.

You need at least one of each to start. Visit How They Work at www.One-Lights.com for more information on how they work together.

We will continue to develop a wide variety of styles for you to choose from. Enjoy One-Lights's products. Mix and match, and don't forget to have fun. We have a new series coming out just for kids.

“Intelligent designs run good economies.”

- Papaconstantinou, Constantinos Founder of One-Lights Canada and Produits Maison DIN Home Products.

Greater technologies are rapidly being implemented in our new products. New marketing and development strategies are continuously being implemented. We continue to look for talented individuals to continue to create new, and implement interesting strategies at One-Lights Canada.

Our email box is always open to all candidates. New prospects are welcome and encouraged to send their CV to us by electronic mail. Send us your Curriculum Vitae with a clear subject headline and include your name, specific area of expertise, and a clear description of how you can help make One-Lights Canada a more interesting company.

Enjoy our products,
